

JSO Technology LLC Completes Juniper Networks EX Series Switch Installation at Jefferson County

Wauwatosa based Information Technology Solutions Provider JSO Technology LLC replaces Cisco Switches with Juniper Networks EX Series Switches at Jefferson County

Wauwatosa, WI (www.jsotechnology.com) June 1, 2009 –Wauwatosa, WI based JSO Technology LLC has completed work on a major computer network switch replacement at the Jefferson County Government offices located in Jefferson, WI.

The partnership between JSO Technology LLC and Jefferson County has been in place for over 9 years. JSO provides the county with Information Technology security solutions, on-site technical support and consulting services.

The county was in need of cutting expense costs along with the need to upgrade to a switching technology that would support them for 7-10 years in the future. After much research of the current network switch marketplace, which includes well known names such as HP, Cisco and Nortel, the choice was made to make the move toward implementing the Juniper Networks EX series of network. Juniper switches will allow the county to accommodate future growth and network stability at a reduced maintenance cost.

The previous Cisco switch configuration was aging and expensive to maintain. Finding a superior switching technology that also offered lower annual maintenance costs was a prime objective of Roland Welsch, the Information Technology Director for Jefferson County. He says, "The Juniper EX series that we have implemented in our network will cut our maintenance costs in half!"

In addition to the significant cost savings associated with the implementation of the Juniper EX switches, network performance was greatly enhanced. Jefferson County went from a switched 100 MB network to a switched 1000 GB network. The computer users in Jefferson County, which include the Jefferson County Sheriff Department, Highway Department, the Countryside Nursing Home and the legislative and administrative departments, now enjoy a speed boost ten times greater than they had previously. The Juniper EX switches accommodated the county's move to a 10GB network.

Roland adds "I was very pleased with the minimal downtime our users experienced when the switches were swapped out. Most of them didn't realize there was any change to the core network at all!"
